## **PRESS RELEASE**

### **DVS 6000 MARKET EXPANDS**

Diversified Industries Ltd. ("Diversified" or "the Company") is pleased to announce that its DVS 6000 hydrogen sulphide ("H<sub>2</sub>S") scavenger is being used with great success as a polishing agent to keep H<sub>2</sub>S below the required pipeline specification of 6 parts per million ("ppm") in natural gas at a sour gas plant in Saskatchewan.

Grimes Energy Ltd. of Kisbey, Saskatchewan has been using DVS 6000 for over 100 days as an H<sub>2</sub>S polishing agent by injecting less than 2 litres per day of DVS 6000 into a daily product of one million cubic feet of processed natural gas. When H<sub>2</sub>S levels spike to more than 6 ppm and the gas plant's amine contactor fails to keep H<sub>2</sub>S levels below specifications, the gas stream goes to a flare stack. This results in the loss of valuable gas, or release of H<sub>2</sub>S into the atmosphere should the flare stack also fail. Using DVS 6000 as a polishing agent conserves processed gas resources and protects the environment and neighbouring property from the deadly effects of H<sub>2</sub>S.

The results obtained by Grimes Energy Ltd. are documented in a letter which can be viewed on the Diversified's website ([www.dvsind.com](http://www.dvsind.com)). They demonstrate that DVS 6000 can be used to neutralize H<sub>2</sub>S by direct injection into the pipeline at wellheads of low H<sub>2</sub>S gas wells. Other candidates for DVS 6000 are old gas fields that are turning sour or areas with no sour gas pipelines. DVS 6000 can be used in remote locations with a very minimal amount of equipment. DVS 6000 H<sub>2</sub>S scavenger has a freeze point of minus 45°C, is non-corrosive, non-flammable and very user friendly. DVS 6000 can be diluted in water or methanol if required.

There are more than 250 sour gas plants in Western Canada and hundreds of sour gas wells that are potential users of DVS 6000 as a polishing agent. The excellent results obtained by Grimes Energy will open the doors for Diversified's distributors in Canada and the Middle East for increased sales and an expanded potential worldwide market for DVS 6000. Diversified continues to define a growing number of uses for the DVS 6000 H<sub>2</sub>S scavenger.

.../2

Diversified is a product development and marketing company specializing in unique technologies and solutions targeting a cross section of industries. Diversified has developed its first technology, DVS 6000, for the removal of various contaminants such as H<sub>2</sub>S from oil, gas, air and water. DVS 6000 has proven itself in several applications thus far within the oil and gas industry. Diversified's management team will continue to evaluate new technologies in order to carry out the Company's strategic goal of diversifying its technology portfolio.

Diversified is listed on the TSX Venture Exchange under the symbol "DVS". For further information, please e-mail [info@dvsind.com](mailto:info@dvsind.com), visit the Company's website ([www.dvsind.com](http://www.dvsind.com)) or phone Mr. Stephen Davis, President/CEO, at 250-655-9209.
